

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

THE WILSON BULLETIN

Published at Oberlin, Ohio, by the Wilson Ornithological Club.

Official Organ of the Wilson Ornithological Club and the Nebraska Ornithological Union (in affiliation).

Price in the United States, Canada and Mexico, \$1.50 a year, 50c a number, post paid. Price in all countries in the International Union, \$2.00 a year, 60c a number. Subscriptions should be sent to Geo. L. Fordyce, Youngstown, Ohio.

EDITORIAL

The brightest spot in the whole summer trip, which the editor was privileged to make last summer, was the stay of his party at the Lake Okoboji McBride Lake Laboratory. It was not merely a haven of rest, after the four days of wallowing in the mud of the incomparably rich soil of Iowa, but as well a haven for study. Dr. Wylie, the Director, and Dr. Stephens, one of our ex-presidents, made our stay of three days the best three days of the whole trip. They were ably seconded by the other members of the staff of the Laboratory.

The short trip to Alaska, after the close of the automobile trip, through the Inside Passage to Skagway, and from there over the White Pass and Yukon railway to White Horse, Yukon Territory, by boat through the chain of Atlin lakes in northern British Columbia, was a fitting climax to the summer wanderings. The most notable birds seen on this trip were the swarms of short-billed gulls along the Inside Passage, and the Hudsonian chickadees and and Townsend's solitaire in the lodge-pole pine forests at White Horse. There was some evidence of a small nesting colony of herring gulls at the north end of lake Bennett. We were there between the visitations of the mosquitoes and the "noseeums," therefore our stay was a pleasant one. If there were migrations in progress no evidence of such could be seen. The weather was cool.

Never in the history of the Wilson Ornithological Club has such a wealth of good material been offered for publication. To the editor it is becoming not only clear but imperative that some plan should be devised immediately whereby more of these papers can be published. The most obvious plan would be to increase the number of pages to 64 per issue, and for this increase in value charge larger membership fees and subscription rates. There is no likelihood that publication prices will ever reach the pre-war rates, or even approach them, at least for some years to come. Reduction of the size of the Wilson Bulletin with membership dues and subscription rates remaining the same would be suicidal. Members should plan to be present at the next annual meeting and be prepared to reach a solution of this problem. It is vital.
